Fourth of July Rose

Rosa 'Fourth of July'

Height: 12 feet

Spread: 3 feet

Sunlight: ○

Hardiness Zone: 4b

Group/Class: Climbing Rose

Description:

Large explosions of color cover this climbing rose all season long and are spectacular to behold; place where the lovely scent can be appreciated; can be trained on trellises or over walls for dramatic effect; excellent for border walls and walkways

Ornamental Features

Fourth of July Rose features showy fragrant semi-double white flowers with pink overtones and red streaks along the branches from late spring to late fall. The flowers are excellent for cutting. The fruits are showy red hips carried in abundance from early to late fall. It has green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Fourth of July Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This woody vine will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Planting & Growing

Fourth of July Rose will grow to be about 12 feet tall at maturity, with a spread of 3 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
